Main command for us: `nix-shell`

Provides a bash shell with extended environment if the current directory contains a `default.nix` file.

# Nixpkgs

NIXPKGS is a big nix program which produces *derivations*.

*Derivation* is the NIX technical term

- for the recipe (source, patches, compilation instructions, install instructions)
- to produce a packages (binaries, libraries, shared files).

NIXPKGS is overridable at will, but the operation can be complex.

# Coq Nix Toolbox

The toolbox is an extra layer between NIXPKGS and the end-user to facilitate many tasks, some of which are dedicated to COQ.
